INTRODUCTION to the ARMY-NAVY CATALOG of MEDICAL MATERIEL

SUPERSEDURE NOTICE

This catalog supersedes the War Department Catalogs MED 3 and 6 of March 1944 and the BuMed Section of the Catalog of Navy Material of July 1946 and all changes which have been promulgated thereto. Discard the superseded catalogs upon the effective date of this catalog.

EFFECTIVE DATE

This edition shall be effective upon dates to be announced in a War Department Circular for the Army and in a BuMed Circular Letter for the Navy.

PLAN OF THE CATALOG

The Army-Navy Catalog of Medical Materiel consists of fourteen classes of materiel and fifteen supplements as listed in the CONTENTS. These are separately bound pamphlets punched for insertion in a standard binder which is furnished with each complete catalog. The use of individual pamphlets facilitates provision of additional copies of sections which may be required for special purposes. It also allows the reprinting of individual sections, when, because of numerous changes or other reasons, such reprinting is deemed desirable. Standard prices for items are computed each fiscal year and a new edition of the STANDARD PRICE SUPPLEMENT will be published and distributed annually. Changes to the catalog which do not require the reprinting of a section will be issued periodically.

Such changes will be cumulative, thereby providing the user with complete information on changes in one publication. Superseded sections and changes will be discarded.

ITEMS INCLUDED

This catalog lists all items currently standardized for storage and issue by the Medical Department of the Army and the Bureau of Medicine and Surgery of the Navy. The items included in this catalog were selected and approved by the Army-Navy Medical Materiel and Specifications Board after comprehensive review of all items formerly cataloged by both services.

Some limited standard items are also cataloged. Such limited standard items in general are: (1) replacement parts for previously cataloged items; (2) items on hand that are functional substitutes for standard items; (3) items on hand which were listed in the previous catalogs of both services and for which there is a limited demand.

Newly standardized items not previously cataloged by one or both services also are listed. These items will be identified in the Numerical Cross-Index.

CLASSIFICATION OF ITEMS

Items are arranged in fourteen classes, numbered 1 to 14. A list of the classes and their titles appears in the CONTENTS. The disposition of items formerly in Navy Class 14 will be found in the NAVY CONVERSION TABLE. Items have been classified according to professional types and common usage. In some cases where an item might correctly be cataloged in any one of several classes, it has been placed in the class in which it is considered to be most widely used. The listing of an item in a particular class does not restrict its use to any particular group or service of a Medical Department activity. An item listed in Class 4, Laboratory and Pharmacy Equipment and Supplies, might be required by the dental department, surgical service or various other special departments; the item is considered to be as readily available to all users by its inclusion in Class 4 as it would be if listed in any other class of the catalog.

PRESENTATION OF ITEMS

Items are listed horizontally on the catalog pages under seven columns with the following headings: Availability Status, Expendability, Stock Number, Nomenclature and Description, Unit of Issue, Packaging and Packing, and Notes. Items are listed in alphabetical order within each class and sub-class, and their corresponding stock numbers in numerical sequence. Items which have components or accessories that are separate items of issue are presented with such components or accessories for convenience in using the catalog.

AVAILABILITY STATUS

This column indicates by symbols the availability of a cataloged item to Army or Navy medical activities. The absence of any symbol indicates that the item is standard and available to both the Army and the Navy. The letters "LS" indicate that an item is Limited Standard; the letter "S", standard. The letter "A" indicates that the item is available only to Army activities. The letter "N" indicates that the item is available only to the Navy.

EXPENDABILITY

Expendable items are indicated by the symbol "X" in the column before the Stock Number. All items not so indicated are nonexpendable. Note carefully the changes in expendability status which have been made and which are promulgated for the first time in the catalog. The classification of property as expendable and nonexpendable has no bearing on the responsibility for its proper use and disposition by the individual to whom issued or entrusted. Army and Navy regulations are specific as to the responsibility of individuals for government property, both supplies and equipment, entrusted to their care.

STOCK NUMBERS

The stock numbers contain seven or eight digits, according to catalog class, divided by dashes or hyphens into three groups. The first group consists of one or two digits and serves to indicate the catalog class in which the stock number appears. The additional six digits have no significance other than item identification, and are divided into groups merely to facilitate use. Examples: Stock Number 1-001-000 is assigned to Acacia, 1 lb.; the first group of the stock number indicates an item of Class 1, and the remaining two groups 001-000 identify the item within that class. Stock Number 10-900-000 is assigned to American Illustrated Medical Dictionary, The, 20th Edition, 1944; the first group of the stock number indicates an

item of Class 10, and the remaining two groups, 900-000, identify the item within that class. COMPLETE CROSS REFERENCE TABLES OF OLD AND NEW STOCK NUMBERS ARE GIVEN IN THE NUMERICAL CROSS-INDEX, ARMY CONVERSION TABLE AND NAVY CONVERSION TABLE FOR USE IN CONVERTING STOCK ON HAND TO THE NEW STOCK NUMBERS.

UNIT OF ISSUE

When the quantity contained in a unit of issue is given in the nomenclature, it appears as the last entry before the colon. Items in which the quantity is indicated by weight or measure are listed as 1 oz., $\frac{1}{4}$ lb., 1 lb., 1 pt., 1 gal., etc. Items in which the quantity is indicated by the number in a unit of issue are listed as 6s, 12s, 100s, 500s, etc. The unit of issue appears simply as bottle, pkg., each, pair, etc.

Example

Pencil, Wax, Blue, 12s: Unit—Pkg

An activity requisitioning one unit of this item will receive one package of 12 pencils.

PACKAGING AND PACKING

The figures appearing in the packaging and packing column designate the usual package and case lot quantities. The figures to the left of the slant mark indicate the quantity of units in a carrier carton, package, etc.; the figures to the right of the slant mark indicate the quantity of units customarily packed in original shipping cases as received from contractors.

Examples: 12/144 indicates 12 units in a package and 144 units in a shipping case; —/25 indicates a unit which is packed singly, with 25 units in a shipping case; 6/— indicates 6 units in a package, the quantity in a shipping case not being indicated because issues in lots as large as original shipping cases are not ordinarily made. Whenever requirements approximate package or case lot quantities, such quantities or multiples thereof should be requisitioned, as much repacking for shipment is thereby eliminated.

NOTES

Two symbols are used in this column:

D Item subject to deterioration.

R Item of alcohol, alcoholic beverage or narcotic requiring special storage and issue precautions.

NOMENCLATURE AND DESCRIPTION

The complete item nomenclature and description is divided into two parts, separated by a colon. The item nomenclature consists of the information appearing in bold-face type before the colon and includes the quantity contained in the unit of issue where indicated. The additional descriptive information appearing after the colon in light-face type is provided as supplemental data for the benefit of the catalog user and *will not be transcribed on requisitions*.

Example

Availability Status	Expendability	Stock No.	NOMENCLATURE AND DESCRIPTION	Unit of Issue	Packaging and Packing	Notes
	X	1-100-100	Benzyl Benzoate, Saponated, 1 pt: The addition of 3 pints of distilled water results in an emulsion containing approximately 25% Benzyl Benzoate, USP.	Can	—/24	
	X	1-148-950	Codeine Sulfate Tablets, 0.032 Gm. (½ gr.), 20s: USP; hypodermic.	Tube	100/3600	R

Two variations of the standard method of presenting nomenclature and description are used, namely the unnumbered and indented entries. Unnumbered entries present indented components which are assembled to provide the item listed, or they direct the catalog user to an item listed elsewhere in the catalog or available from other sources. *Unnumbered entries are not to be requisitioned*. The indented entry is designed to assist the catalog user by listing components or accessories directly below an item or group of items with which they are used. *Do not indent these items on requisitions*.

Example

Availability Status	Expendability	Stock No.	NOMENCLATURE AND DESCRIPTION	Unit of Issue	Packaging and Packing	Notes
			Blood Gas Apparatus, Van Slyke: Consists of burette with supporting frame, leveling bulb, support stand, 2 open rings and 3 feet of rubber tubing. Requisition by separate components as indented below.

	X	4-473-625	Rack, Pipette, Pipette Washer: 5½ inch diameter; holds 200 1 ml. serological pipettes. Replacement for 4-473-600.	Each	1/6	

Variations from Catalog Descriptions

Catalog listings are intended to describe adequately articles furnished under each stock number. Slight variations from catalog descriptions may occur for certain items, due to differences in the products of various manufacturers, minor specification changes and exigencies of procurement. Dimensions given are exact when precise measurements are necessary for use or performance, but should be regarded as approximate for items in which slight variation in size would be of no consequence.

Trade Names

Reference is sometimes made in catalog listings to a trade name under which an identical or similar article is sold, or to a manufacturer or company producing or selling such an article. Such references are made solely to indicate the character or quality of the item required, and in no way limit the use of the article or the possibilities of procurement to that particular trade name, manufacturer or company.

Electrical Characteristics

Items having electrical characteristics are furnished only in accordance with descriptions given under catalog listings. Requirements for electrical characteristics other than those listed will be met by requisitions for nonlisted items in accordance with existing instructions.

ILLUSTRATION SUPPLEMENTS

Illustration Supplements are published for Classes 3, 4, 5, 6, 7, 8 and 14. Items which are illustrated in the catalog are designated in the item listing by the word *Illustrated* at the end of the item description. Illustrations, where used, are intended to supplement the text of the item description and may be typical rather than exact representations, since the products of various manufacturers may vary somewhat in appearance.

COMPONENT PARTS SUPPLEMENTS

Two Component Parts Supplements for Special Kits and Assemblies are published, one for the Navy and one for the Army. These supplements contain a detailed list of the contents of kits, sets, outfits and assemblies.

ALPHABETICAL INDEX

This index includes synonyms, catalog nomenclature, common nomenclature and variations of all items cataloged. Use the index. Many item nomenclatures have been changed from those used in previous editions. Reference to the index will immediately locate the items desired, as they will be found in the index under both new and former name, as well as by other names in common use.

NUMERICAL CROSS INDEX

This index lists the Army-Navy stock number, the former Army stock number and the former Navy stock number. The Army stock number is that published in MED 3, War Department Medical Supply Catalog, 1 March 1944, including changes. The Navy stock number is that published in the Catalog of Navy Material, BuMed Section, July 1946 Edition. Items cross-referenced in this index are identical or equivalent. Navy activities will refer to Navy Conversion Table, Part I, for ratio of substitution.

CONVERSION TABLES

Two Conversion Tables are included, one for Army and one for Navy. These tables include instructions relative to the conversion of former stocks to the new system.

STANDARD PRICE SUPPLEMENT

This pamphlet lists unit prices of all items in the Army-Navy Catalog of Medical Materiel. A surcharge on sales or transfers to other agencies will be made in accordance with the respective service regulations.

USE OF STANDARD ITEMS

This catalog is designed to include all medical equipment and supplies regularly furnished and is intended to meet the ordinary requirements of medical activities. Standard items available from stock will be utilized in preference to nonstandard materiel requiring individual procurement. Before requisitioning nonstandard items, careful comparison should be made with these catalog listings in order to determine whether the materiel desired, or an acceptable substitute, is available for issue from the respective Medical Supply Systems.

DISTRIBUTION OF THE CATALOG

The initial distribution of this catalog and future changes will be automatic in accordance with standard procedures of each service.

REQUESTS FOR CATALOG

For Army activities additional copies will be requisitioned from the Adjutant General in accordance with AR 310-200, as amended. Navy facilities will obtain additional copies of the catalog, Stock Number 10-900-500, by submission of NavMed Form-4 to U. S. Naval Medical Supply Depot, Sands and Pearl Streets, Brooklyn 1, New York. Requests for catalogs from other than Army or Navy shall be submitted to the Surgeon General of the Army or Navy.

PREPARATION OF REQUISITIONS

Requisitions for medical materiel shall be prepared in accordance with the detailed instructions promulgated by the respective services.

NOTE TO USERS OF THE FORMER ARMY CATALOG

The Army-Navy Catalog of Medical Materiel replaces MED 3 and 6 Sections of War Department Catalog. MED 7 and 9 will be replaced by an Army-Navy Catalog of Spare Parts. MED 1 and 2 will remain in effect.

However, these sections will remain in effect until the new catalogs have been prepared and distributed. No publications have been distributed under MED 8 series. This catalog does not rescind or replace MED 4 and 10 Sections of the War Department Catalog. These sections will remain in effect.

For information concerning the distribution of MED 10 series (Medical Department Equipment Lists) see MED 10-1, Index and Reference to Equipment Lists and Instructions for Use of Equipment Lists, which will be issued automatically to all units having a requirement for any pamphlet in the MED 10 series.

NOTE TO USERS OF THE FORMER ARMY CATALOG (Cont'd)

In addition to changes mentioned above this catalog revises the format and contents of MED 3 section in many respects.

- (1) Sub-class for biologicals furnished by Service Command (now Army Area) Laboratories is omitted. Each laboratory will notify installations in the Army Area served as to supplies and services which it is prepared to furnish. Sub-class for biologicals furnished by the Army Medical Center is no longer separated in the catalog. The items retained are cataloged in regular order and class with the source of supply shown in the item description.
- (2) Sub-classes in Class 3 are omitted and consolidated into one general class of "Surgical and Diagnostic Equipment and Supplies."
- (3) Class 4, "Laboratory and Pharmacy Equipment and Supplies", now includes pharmacy equipment and supplies formerly cataloged under Class 7.
- (4) A sub-class, "Precious Dental Metals and Alloys", has been added to Class 5 for dental gold and platinum material.
- (5) Class 7—All fixtures such as sterilizers, operating lamps, etc., have been deleted from sub-class "Miscellaneous Equipment and Supplies" and cataloged under the first sub-class; incandescent and fluorescent lamp bulbs have been deleted from other classes and cataloged under the sixth sub-class of Class 7; gas cylinders have been deleted from Class 7 and cataloged in Class 1.
- (6) Class 9 has been consolidated into one alphabetical class, "Field Equipment and Supplies—Special Kits and Assemblies." Drugs, dressings, furniture, fixtures, and other items of supply which are components or end items, have been removed from Class 9 and cataloged under other classes. This class now includes only kits, sets, assemblies, sub-assemblies and their containers or parts of containers.
- (7) Class 10 is a new classification replacing "B" Class (Books).
- (8) Class 11 is a new classification replacing "F" Class (Occupational Therapy).
- (9) Class 12 is a new classification replacing "H" Class (Orthopedic Appliances, etc.).
- (10) Class 13 is a new classification replacing "P" Class (Physical Reconditioning).
- (11) Class 14 is a new classification for the cataloging of Optical Equipment and Supplies.

BULB SHAPES—LARGE LAMPS

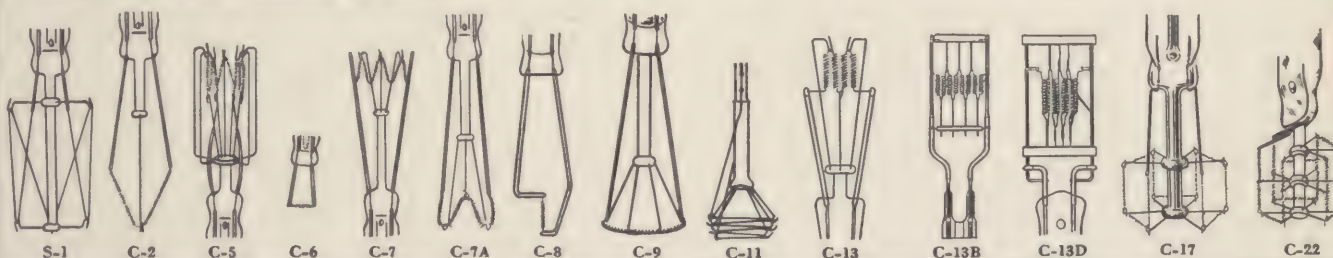

BULB SHAPES—MINIATURE LAMPS

FILAMENT DESIGNATIONS

Filament Designations consist of a prefix letter to indicate whether the wire is straight or coiled, and a number to indicate the arrangement of the filament on the supports. Prefix letters include: S (straight)—wire is straight or slightly corrugated; C (coiled)—wire is wound into a helical coil or it may be deeply fluted; CC (coiled coil)—wire is wound into a helical coil and this coiled wire again wound into a helical coil. Shapes of filaments are shown below.

INTRODUCTION

1. This pamphlet supersedes War Department Catalog MED 6 of March 1944, and all changes which have been promulgated thereto.

2. This pamphlet lists the component parts of sets, kits and outfits stored and issued by the Army Medical Department as listed in the various classes of the Army-Navy Catalog of Medical Materiel.

3. Components of equipment lists are shown in MED 10 series pamphlets—MED 1 includes a list of MED 10 pamphlets and furnishes instructions relative to their use and distribution.

4. Other technical service items listed in this pamphlet are issued as components of sets, kits and outfits; however, replacement requirements are not stored and issued by the Medical Department. Replacements will be requisitioned on appropriate technical service in the usual manner in accordance with current regulations.

**ARMY-NAVY CATALOG
of MEDICAL MATERIEL**

JULY 1947

PRELIMINARY EDITION

**ARMY-NAVY CATALOG
OF
MEDICAL MATERIEL**

**NAVY
COMPONENT PARTS SUPPLEMENT**

ARMY - NAVY MEDICAL PROCUREMENT OFFICE

PEARL & SANDS STS., BROOKLYN 1, N. Y.

FOREWORD

This supplement will be inserted in the Catalog following Class 9.

This supplement lists the component parts of each field unit, special kit, or assembly standardized for storage and issue by BuMed. This information was previously listed in the Special Medical Outfits and Field Medical Units Sections of the former Medical Department Supply Catalog.

Standard Catalog items are listed in alphabetical-numerical order, by classes, for each field unit, special kit, or assembly, with the total number of each individual item contained in each unit. Nonstandard items are listed in alphabetical order and are furnished by BuMed only in initial issue.

INFORMATION and INSTRUCTIONS—FIELD MEDICAL UNITS

1. Medical, surgical, and hospital supplies and equipment for the Naval Medical Department serving afield are packed in unit containers herein designated **FIELD MEDICAL UNITS**. This system of medical supply is designed to supply medical formations when attached to field organizations of:

- a. Landing Forces, Vessels of United States Navy.
- b. Fleet Marine Force Organizations, United States Marine Corps.
- c. Advance Bases.

2. Markings—Each case or crate of field medical units is marked with a single green band encircling the container in two directions at right angles, with a red cross at the center of each side, and with the unit number assigned in the Supply Catalog stenciled near the lower right-hand corner of each side. This marking facilitates immediate identification.

3. Stowage—Field medical units will be assembled at the Naval Medical Supply Depot, Brooklyn, N. Y., and maintained in designated places and in vessels as directed by the Bureau of Medicine and Surgery.

4. Condition of Readiness—All field medical units shall be kept in a state of readiness for immediate use. When requisitioning activities receive field medical units, all component items contained therein which are subject to deterioration will be removed and placed in rotating stock. (See par. 6). Periodic inspection of units will be made in order that they be maintained in a condition of readiness. Unserviceable items of supplies and equipment will be surveyed and replacement requisitions shall be submitted.

5. Requisitions and Surveys—Field medical units and their component items of supplies and equipment will be requisitioned for, surveyed, and accounted for in accordance with procedure set forth in chapter 20, Manual of the Medical Department.

6. Rotating Supplies—Rotating supplies include certain perishable items contained in many of the field medical units. These items are listed in footnotes appearing under the itemized contents of the individual units. Upon receipt of field medical units, the medical officer of the ship or station will remove those items subject to deterioration, place them in regular medical storerooms and "earmark" a numerical equivalent

of similar supplies as **FIELD MEDICAL UNIT RESERVE**. These items will be rotated for issue with regular stock. For example, rubber gloves will be issued from medical supplies for routine use from the oldest stock in the storeroom and the freshest rubber gloves will be held in reserve as replacement for field medical units.

7. Bulk Supplies—These items are supplies which are shipped to activities in commercial packing cases rather than in field medical units. Marine Corps activities will carry on hand as much of these supplies as can be stored or maintained in rotating stock. The remainder will be retained and "earmarked" in the medical supply depot nearest to the activity. When this remainder of bulk supplies is required, it will be requested and the medical supply depot concerned will ship same by whatever carrier will assure timely delivery. The quantity of bulk supplies to be requisitioned in this manner will depend upon the amounts on hand and the estimated requirements, based on the strength and mission of the force. Bulk medical supplies for Marine combat organizations are based on table of allowance replenishment rates and will be furnished by medical supply sections of Service Command Agencies.

8. Material Not Listed in Field Medical Units—The following materials not included in field medical units must, as necessary, be obtained prior to the embarkation of an expedition or the debarkation of the ship's landing force. The quantities required and the selection of materials will depend upon the size and mission of the force.

- a. From a medical supply depot or other medical activity:

Burial Pouches. Caskets, Shipping. Biologicals. Other drugs.

- b. From Naval Medical School, National Naval Medical Center, Bethesda 14, Md: Antigen.

9. Replenishment of Supplies—When serving in the field, medical officers should anticipate their needs for replenishment of medical department supplies and promptly submit requisitions for same by cable, dispatch, or radio. Replacements for Marine Corps equipment are carried by the organization quartermaster and medical supply sections of Service and Field Depots.

PROFESSIONAL BOOKS

ARMY - NAVY MEDICAL PROCUREMENT OFFICE
PEARL & SANDS STS., BROOKLYN 1, N. Y.

FOREWORD

ARMY

The Medical Department of the Army furnishes professional books through three channels:

- (a) Automatic distribution of new books selected by The Surgeon General and procured centrally.
- (b) Monetary credits established in hospitals and other medical installations for the local procurement of desired books.
- (c) A few professional books are carried in depot stocks and may be requisitioned through normal supply channels. These books are indicated by an asterisk (*) in the catalog listing. Books not marked with an asterisk are not available from depots and will not be requisitioned.

NAVY

- (a) This section includes books concurrently standardized for storage and to be issued by requisition.
- (b) Books not cataloged but desired by naval medical activities will be procured locally from allotted funds.

ARMY
CONVERSION TABLE

ARMY - NAVY MEDICAL PROCUREMENT OFFICE
PEARL & SANDS STS., BROOKLYN 1, N. Y.

FOREWORD

The following table shows in abbreviated form, through the use of alphabetical-numerical symbols and keys to these symbols, all changes in item identification for items published in MED 3, War Department Medical Supply Catalog and retained in the Army-Navy Catalog of Medical Materiel. This table also includes instructions for the disposition of items which have been discontinued since publication of the last change (Change 9) to MED 3, War Department Medical Supply Catalog, as well as symbols indicating new items that have been adopted subsequent to Change 9 to MED 3.

The omission of symbols from the "Remarks" column indicates that no changes have been made in the item description other than the addition of hyphens in the stock number.

Items coded A1, A2, A3 and A4 (newly standardized items) are included in the table by entering the new stock number without hyphens in the "Old Stock Number" column to bring these new items into numerical order. These items have not been published in MED 3 or in Changes 1 thru 9 thereto. However, many of these items have been published to Medical Depots and Medical Sections of General Depots in the form of Electric Accounting Machine Listings and Changes.

Instructions relative to procedures and effective dates for re-marking of stocks, and conversion of stock records, etc., will be issued as separate directives by the Office of The Surgeon General.

ADDITION SYMBOLS

- A1 Newly standardized item; not previously published in Med 3 or changes thereto. In order to place these new stock numbers in numerical sequence with other stock numbers in the Conversion Table, the JAN stock numbers without dashes are listed in "Old Stock Number" column.
- A2 Newly standardized item. Previously cataloged as non-standard under stock number indicated. Transfer non-standard stocks to new stock number, nomenclature, description and unit of issue.
- A3 Reinstatement. Item previously deleted from Med 3 by Change 9. Reinstated as Limited Standard.
- A4 Newly standardized item. Previously cataloged as a spare part under stock number indicated. Transfer stock to new stock number, nomenclature, description and unit of issue.

DELETION SYMBOLS

- D1 Deleted from catalog.
- D2 Deleted from catalog. Item declared unauthorized. Stock in use at stations or depots will be picked up on stock records as nonstandard. All quantities on hand in warehouse, if serviceable, will be disposed of as surplus as prescribed in War Department TM 38-419, dated March 1947. Unserviceable stock, not worth repair, will be disposed of through the salvage officer as prescribed in War Department Circular 35, dated 6 Feb 1946. Items in use may continue in service at depots or stations until they are consumed or become unserviceable. Minor repairs may be made if items are to be continued in use; if not to be continued in use, the items will be disposed of as surplus in the same manner as warehouse stock.
- D3 Deleted from catalog. Item declared obsolete. Posts, camps, stations and depots in zone of interior will take action as authorized by War Department TM 38-419, dated March 1947. Overseas Commands will dispose of obsolete items as contemplated by Section IV, War Department Circular 333, dated 2 Nov. 1945.
- D4 Deleted from catalog. Pick up and account for stocks as nonstandard.
- D5 Deleted from catalog. Limited standard items, stock of which are at zero balance or rapidly approaching zero position. Pick up stock on records as nonstandard.
- D6 Deleted from catalog. Storage and issue responsibility transferred to Quartermaster Corps. Depot stocks will be transferred to the appropriate technical service on direction of Requirements and Stock Control Division, SGO.
- D7 Deleted from catalog. Storage and issue responsibility transferred to Corps of Engineers. Depot stocks will be transferred to the appropriate technical service on direction of Requirements and Stock Control Division, SGO.
- D8 Deleted from catalog. Transfer to and account for stocks under indicated stock number.
- D9 Deleted from catalog. Outmoded assembly. Break down into component parts and pick up under appropriate stock numbers.
- D10 Deleted from catalog. Break down assembly into component parts and pick up and account for components under stock numbers indicated.
- D11 Deleted from catalog. Break down assembly into component parts and pick up and account for appropriate components under stock numbers indicated. Dispose of balance of components as nonstandard as shown under D2.
- D12 Deleted from catalog. Item transferred to spare parts and tool catalog under indicated stock number.
- D13 Deleted from catalog. Depot stocks to be transferred to Army Medical Center, Washington, DC, upon direction of the Surgeon General.
- D14 Deleted from catalog. Item 9364000 considered dangerous for administering oxygen therapy. Stocks on hand and in use will be broken down into component parts prior to disposal through surplus declaration. This item will not be declared surplus as an end item.
- D15 Deleted from catalog. Break down into component parts. Transfer stock of Cone Socket Handle to 5-419-350; stock of Magnifying Mirrors with cone socket connection to 5-419-005; stock of Plane Glass Mirrors with cone socket connection to 5-418-005. Stocks of simple stem mirrors with handle to be disposed of as shown under D2.
- D16 Deleted from catalog. Dispose of new and unused stocks as shown under D6; dispose of other than new or unused stocks as surplus in accordance with Code Letter XVIII-172, Office of The Surgeon General, 2 May 1947.
